01

Executive Summary

Fourteen repos and tools were evaluated through direct source code inspection: architecture analysis, prompt engineering review, skill/workflow content audit, release history tracking, and community metrics assessment. Each was classified by its actual function rather than its marketing. Five additional repos were analyzed post-v2.0 (claude-mem, claude-squad, OpenCLI, Anthropic skill-creator, GSD-2) — three deliberately rejected with documented rationale.

Use Case Recommendations

USE CASE	RECOMMENDATION
Best overall choice	Superpowers
Best for beginners	Claude Skills
Best for power users	Superpowers
Best for long / complex projects	Get Shit Done (GSD)
Best for structured / spec-driven workflows	Get Shit Done (GSD)
Best for autonomous loop workflows	Ralphy
Best for domain expertise injection	Claude Skills
Best for UI/UX design generation	UI/UX Pro Max Skill
Best for comprehensive all-in-one setup	Everything Claude Code
Best for plugin catalog & learning	Plugins Plus Skills
Best for role-based AI team workflows	gstack

Ecosystem Update: GSD has expanded with GSD-2, adding a 27-document knowledge base and advanced orchestration patterns. gstack (by Y Combinator CEO Garry Tan) introduces role-based cognitive modes and production-proven review checklists.

Author's Pick

Superpowers would be my first install. It changes how the agent thinks, not just what it does. The anti-rationalization architecture and TDD enforcement produce measurably better code. Then add **Claude Skills** as a complementary expertise layer. For long projects, add **GSD**. For UI-heavy work, add **UI/UX Pro Max**. For role-based workflows with QA and design audit, add **gstack**. The key insight: these tools occupy different layers and the best setup combines 2–3, not all 9.

Tool Profiles

Superpowers

METHODOLOGY FRAMEWORK

by Jesse Vincent (obra) • 257.5K ★ • 22,981 forks • 13 skills • 3 commands • v6.1.1 • 4 platforms

"An opinionated software development methodology delivered as composable skills. Enforces brainstorming before implementation, TDD (no production code without a failing test), systematic debugging, and rigorous code review. The distinguishing innovation is its anti-rationalization architecture."

- + Battle-tested methodology (17 months, 71K community)
- + Zero config—session-start hook auto-loads methodology
- + Cross-platform: Claude Code, Cursor, Codex, OpenCode
- + Exceptional documentation depth per skill
- Prescriptive workflow (can't skip phases easily)
- No orchestration loop or parallel execution
- Windows support is fragile (6+ documented fixes)

Get Shit Done (GSD)

ORCHESTRATION FRAMEWORK

by TACHES (gsd-build) • 64.8K ★ • 5,481 forks • 12 agents • 32 commands • v1.42.3 • 35 workflows

"A multi-agent orchestration framework purpose-built to fight context rot. Uses a lean orchestrator (~10-15% context) that dispatches subagents with fresh 200K-token windows. Features wave-based parallel execution, goal-backward verification, Nyquist test validation, and atomic git commits. Now accompanied by GSD-2."

- + Context engineering solves a real problem (context rot)
- + Full project lifecycle coverage (32 commands)
- + Wave-based parallel execution with dependency awareness
- + Goal-backward verification (checks results, not claims)
- Steep learning curve (32 commands to discover)
- Rapid churn risk (22 releases in 2 weeks, 258 open issues)
- Overkill for simple tasks

gstack

NEW

ROLE-BASED SKILL SYSTEM

by Garry Tan / Y Combinator • 123K ★ • 13 skills • headless browser CLI • v1.1.0 • Bun runtime

"A software factory that turns Claude Code into a virtual engineering team — CEO, Eng Manager, Designer, Staff Engineer, QA Lead, Release Engineer, and Technical Writer. Each role is a complete workflow skill with opinionated checklists, review gates, and persistent browser-based QA testing."

- + Role-based cognitive modes (CEO/Eng/Design/QA)
- + Persistent headless browser for real QA testing (~100ms)
- + Fix-First review methodology (AUTO-FIX vs ASK)
- + AI Slop detection patterns for frontend code
- + "Boil the Lake" completeness principle
- + Production-battle-tested review checklists
- Rails/Ruby-centric examples and patterns
- No multi-agent orchestration (external Conductor)
- Single-session monolithic skills (no delegation)
- Requires Bun runtime for browser CLI

Compound Engineering

PLUGIN + WORKFLOW + CLI

by EveryInc (Kieran Klaassen) • 23.2K ★ • 1,798 forks • 29 agents • 22 commands • v3.19 • 20 skills

"A dual-purpose project: the Compound Engineering plugin (plan → work → review → compound methodology) and a cross-platform CLI converter that translates Claude Code plugins into formats for 10 other AI tools."

- + Cross-platform converter (10 AI tools)—unique
- + Institutional knowledge capture (compound-docs)
- + Deepest feature set (29 agents, 22 commands, 20 skills)
- Rails/Ruby bias in review agents
- Large context footprint (48KB swarm skill alone)
- Single-maintainer dominated (71% of commits)

Claude Skills

SKILLS PACK / PLUGIN

by Jeff Smolinski (jeffallan) • 22.8K ★ • 3,096 forks • 66 skills • 365 references • v2.9.0 • 12 domains

"The broadest knowledge-injection system: 66 specialized skills across 12 domains. Uses progressive disclosure—compact SKILL.md files with deep reference files loaded on demand for token efficiency."

- + Widest domain coverage (66 skills, 12 domains)
- + Token-efficient progressive disclosure architecture
- + Multi-agent support (11 AI coding tools)
- Pre-1.0 maturity (v0.4.9)
- No orchestration or execution engine
- Primarily solo contributor (89% of commits)

Ralphy

AUTONOMOUS TASK RUNNER

by Michael Shimeles • 2.9K ★ • 364 forks • 8 engines • 5 task formats • v4.7.2 • 10+ contributors

"A standalone CLI that orchestrates AI coding agents in an autonomous loop until a PRD is fully implemented. Supports 8 AI engine backends, parallel execution with git worktrees or sandboxes."

- + Simplest mental model: ralphy --prd PRD.md
- + Engine-agnostic (8 AI backends)
- + Parallel execution with sandbox isolation
- Runs with --dangerously-skip-permissions
- Zero quality guardrails (no TDD, no review)
- Bad PRDs produce bad code at machine speed

Everything Claude Code

COMPREHENSIVE PLUGIN SYSTEM

by Affaan Mustafa (affaan-m) • 231K ★ • 35,311 forks • 58 skills • 13 agents • v2.0.0 • 35 commands

"A comprehensive, battle-tested productivity system built on 10+ months of intensive daily production use. Includes 58 skills, 13 specialized agents, 35 commands, a mature hook system, multi-language rules architecture, and security-first design with AgentShield integration."

- + 992 internal validation tests—most thoroughly tested
- + Security-first: AgentShield, 1,282 security tests
- + Multi-language rules (common/ + language-specific/)
- "Kitchen sink" risk—58 skills + 35 commands
- Hook debugging is opaque (10s timeouts)
- Node.js dependency for hooks and scripts

Plugins Plus Skills

MARKETPLACE + LEARNING HUB

by Jeremy Longshore • 2.5K ★ • 365 forks • 315 plugins • 1,537 skills • v4.15 • 15 tutorials

"The largest single-repo Claude Code marketplace: 315 plugins across 20+ categories with 1,537 validated agent skills."

- + Largest catalog (315 plugins, 1,537 skills, 20+ categories)
- + Exceptional educational content (playbooks, tutorials)
- + CCPI CLI for search/install/validate
- Quality varies across 315 plugins
- Discoverability challenge (17,524 files, 132MB)
- No quality ratings or user review system

UI/UX Pro Max Skill

DESIGN INTELLIGENCE SKILL

by nextlevelbuilder • 107.7K ★ • 11,480 forks • 68 UI styles • 96 palettes • v2.11.0 • 18 platforms

"A single-domain design intelligence skill that generates production-ready design systems from natural language. Contains 68 UI styles, 96 color palettes, 57 font pairings, 100+ reasoning rules."

- + 100+ reasoning rules teach Claude why designs work
- + 8-tier priority framework (accessibility → style)
- + Zero Python deps—stdlib only, runs offline
- Single-domain: zero value for non-UI/UX work
- Windows symlink issues (open issue #109)
- CSV data ceiling—no database backend for scale

Classification Matrix

All 9 tools compared across the same dimensions for direct, apples-to-apples evaluation.

Table 1: Methodology, Orchestration & Role-Based Tools

DIMENSION	SUPERPOWERS	GSD	GSTACK	COMPOUND ENG.	CLAUDE SKILLS
Category	Methodology	Orchestration	Role-Based	Plugin+CLI	Skills Pack
CC Fit	Native	Native	Native	Native	Native
Setup	Low	Low	Low-Med	Low	Low
Learning Curve	Medium	High	Medium	Med-High	Low
Maintenance	Active	Very Active	Very Active	Very Active	Active
Best For	Process discipline	Complex multi-phase projects	Role-based team workflows	Cross-platform power users	Domain expertise

Table 2: Comprehensive, Design, Marketplace & Autonomous Tools

DIMENSION	EVERYTHING CC	UI/UX PRO MAX	PLUGINS+SKILLS	RALPHY
Category	Comprehensive	Design Intel	Marketplace	Auto Runner
CC Fit	Native	Native	Native	External
Setup	Low-Med	Low	Low-Med	Low
Learning Curve	Medium	Low	Med-High	Low
Maintenance	Active	Active	Active	Moderate
Best For	Standardized team workflows	Design system generation	Plugin catalog + learning	Fire-and-forget automation

04

Deep Comparison

Each criterion is assessed with a named winner, explanation, and trade-offs.

CRITERION	WINNER	RUNNER-UP	TRADE-OFF
Prompt Quality	Superpowers	gstack	Superpowers prevents rationalization; gstack provides role-specific cognitive modes
Agent Architecture	GSD	Compound Eng.	GSD's context-rot solution is novel; CE has more agents
Review Methodology	gstack	Compound Eng.	gstack's Fix-First with suppressions is production-proven; CE has broader swarm
QA Testing	gstack	—	Only tool with persistent headless browser QA. Others rely on MCP or manual testing
Documentation	Claude Skills	Superpowers	CS has deep reference files per skill; SP has exceptional per-skill docs
Domain Coverage	Claude Skills	Everything CC	CS covers 12 domains; ECC covers multiple languages with rules architecture
Ease of Use	Ralphy	UI/UX Pro Max	Ralphy is one command; UI/UX Pro Max is one skill for its domain
Safety	Superpowers	Everything CC	SP enforces TDD gate; ECC has 1,282 security tests with AgentShield

05

Honest Reality Check

No tool is perfect. Here's what each project needs to address honestly.

- **Superpowers** — No parallel execution. Prescriptive workflow can frustrate experienced devs who want to skip phases.
- **GSD** — 32 commands is overwhelming. Rapid release cadence (22 in 2 weeks) risks instability.
- **gstack** — Rails-centric patterns. No built-in orchestration — requires external Conductor for parallelism. Monolithic skill files.
- **Compound Eng.** — 48KB swarm skill strains context. Rails/Ruby bias in review agents. Single maintainer risk.
- **Claude Skills** — Pre-1.0 maturity. No execution engine. Solo contributor.
- **Ralphy** — `--dangerously-skip-permissions` is concerning. Zero quality gates. Bad PRD = bad code fast.
- **Everything CC** — Kitchen sink risk. Hook debugging is opaque. Node.js dependency.
- **Plugins Plus Skills** — Quality varies across 315 plugins. Discoverability is a real challenge.
- **UI/UX Pro Max** — Single domain. CSV backend can't scale.

06

Recommendations by Scenario

SCENARIO	RECOMMENDED STACK	WHY
Solo founder, new project	Superpowers + UI/UX Pro Max	Process discipline + design quality
Team with established codebase	GSD + Claude Skills	Context management + domain expertise
Rapid prototyping	Ralphy	Fire-and-forget speed
Production app with QA needs	gstack	Browser-based QA + role-based review gates
Enterprise / compliance	Everything CC + Superpowers	Security-first + methodology
Learning Claude Code	Plugins Plus Skills	Tutorials + browsable catalog
Cross-platform (multiple AI tools)	Compound Engineering	Only tool that converts between 10 formats

07

Combining Tools

The best setup combines 2–3 tools from different layers, not all 9.

SAFE COMBINATIONS

- Superpowers + Claude Skills** — methodology + domain expertise (different layers, no conflict)
- GSD + Claude Skills** — orchestration + expertise (complementary)
- gstack + Superpowers** — role-based QA/review + methodology (some overlap in review, but different angles)
- Superpowers + UI/UX Pro Max** — methodology + design (orthogonal domains)

RISKY COMBINATIONS

- Superpowers + GSD** — competing workflow philosophies. GSD's commands may conflict with SP's skill triggers.
- Everything CC + Compound Eng.** — both are comprehensive. Combined context footprint is excessive.
- gstack + GSD** — different orchestration models. gstack's monolithic skills vs GSD's lean orchestrator.

Final Ranking

Confidence-scored ranking based on evidence-based evaluation. Scores reflect utility for a production software team using Claude Code as primary development tool.

1	Superpowers	9.2	High	Best prompt engineering. Anti-rationalization is unique. TDD gate is the strongest quality enforcer.
2	Get Shit Done (GSD)	8.8	High	Context rot solution is novel and validated. GSD-2 adds depth. Steep learning curve holds it back.
3	gstack NEW	8.5	Med-High	Role-based cognitive modes are original. Browser QA is unique. Review checklists are production-proven. Rails bias and no orchestration lower universality.
4	Everything Claude Code	8.3	High	Most tested (992 tests). Security-first is rare. Kitchen-sink risk and opaque hooks prevent top ranking.
5	Compound Engineering	8.0	Medium	Cross-platform converter is unique. Deepest feature set. Context footprint and maintainer concentration are concerns.
6	Claude Skills	7.8	Medium	Widest domain coverage. Progressive disclosure is clever. Pre-1.0 and solo contributor limit confidence.
7	UI/UX Pro Max	7.5	Medium	100+ reasoning rules are genuinely educational. Single-domain limits utility.
8	Plugins Plus Skills	7.2	Medium	Best learning resource. Quality variance across 315 plugins is the main risk.
9	Ralphy	6.8	Low	Simplest model but <code>--dangerously-skip-permissions</code> and zero quality gates are hard to recommend.

Note: Rankings reflect utility for a production software team using Claude Code as primary development tool. Your ranking may differ based on your specific needs — a solo frontend developer would rank UI/UX Pro Max much higher.
